

Summary of Features

An online database to archive and store resumes received by your corporation. The database is for internal use only and would require access controls defining user permissions.

Different repositories inside the database – general resumes, archived resumes, etc.. The database allows users to upload resumes in to any repository. The user is also able to mass upload a .zip file of resumes in to the database. Each resume has required information during upload: date received and source (e.g. Dice, Monster, BDJobs, employee referral, etc.) as well optional comments, tags, etc.

Users can perform Boolean search for keywords/phrases inside the resumes database. Additional search filters include: date received (range – from/to), date updated (range – from/to), salary requirements, etc.. Search results display the number of hits for a searched word/phrase with the highest amount of hits up top.

Collect, Categorize, and Store

Upload resumes in centralized DB;
Use tags, notes; Store in appropriate repository.

Intelligent Search

Finding the right resource is easy and accurate. Use **ranking**, weight, proximity search, etc.

Archive & More ...

Create candidate profiles, manage applicants, Archive resumes – all automated.

- Supported document types: doc, docx, PDF, html, xls, etc.
