

## Why Periscope ERP:

Periscope's ERP (Enterprise Resource Planning) solution integrates various business functions into one complete system to streamline processes and information across the entire organization. Various processes that are essential to running a business, including sales, purchasing, accounting, human resources, inventory, production, loan management and beyond are integrated in the ERP system.

The central feature of the ERP system is a shared database that supports multiple functions used by different business units. In practice, this means that employees in different divisions—for example, accounting and sales—can rely on the same information for their specific needs.

Periscope's ERP software also offers synchronized reporting and automation. Instead of forcing employees to maintain separate databases and spreadsheets that have to be manually merged to generate reports, ERP solution allows staff to pull reports from one system.

## Key Features & Modules:

- Feature-rich web-based solution built using cutting edge technologies
- Fully customizable solution per client requirements
- Support of multiple business units/companies
- Role-based and business unit level security
- Multicurrency support & processing
- Complete automation of various business processes: accounting, sales, purchasing, inventory, production, warehouse, loan management, HRMS/payroll.
- Various management decision reports
- Designed for growth/expansion

## Related Services:

- Consulting & training
- ERP hosting services—to minimize infrastructure investment
- Connectivity solution design
